

Ready. Set. STOP

Active Directory Threats

With a Complimentary Active Directory Risk Review

Did You Know?

80%

of all breaches use compromised identities and can take up to 250 days to identify¹

1. 2022 CROWDSTRIKE GLOBAL THREAT REPORT

50%

of organizations experienced an Active Directory (AD) attack in the last two years²

2. EMA Research Report - The Rise of Active Directory Exploits

40%

of those attacks were successful because adversaries exploited weak AD hygiene³

3. EMA Research Report - The Rise of Active Directory Exploits

The ability to detect and stop identity-based attacks is critical to your organization's security posture — and AD is a good place to start.

What we discovered in previous Active Directory Risk Reviews:

A financial services organization with **hundreds of accounts** that had not been used for years and **never disabled**.

A consumer technology company with **13 over-permissioned accounts** with Domain Admin Rights for the past **19 months**.

The Challenge: Active Directory Oversights

Organizations may not prioritize AD hygiene because either they're unaware of the risk or they find it hard to proactively monitor AD accounts with point solutions.

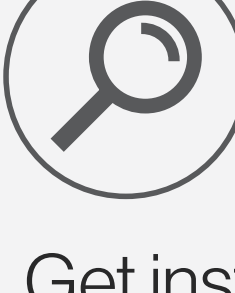

CrowdStrike offers a simple and elegant solution that requires zero deployment if you're a CrowdStrike Falcon® Insight XDR customer, or an easy-to-deploy lightweight sensor if you're a new customer.

The Solution: Active Directory Risk Review

The CrowdStrike Falcon® platform offers comprehensive protection against identity-based attacks in real time. The same stable and reliable Falcon sensor that protects millions of endpoint devices can protect your AD domain controllers as well. It provides instant visibility into your AD hygiene and deep insights into possible attack paths that an adversary could exploit.

With a complimentary Active Directory Risk Review with CrowdStrike experts, you will:

Get instant visibility into your AD hygiene and compromised credentials in your Falcon console.

Receive deep insights into possible attack paths that adversaries can exploit with expert advice on how to address them.

Understand how to protect your organization from modern identity-based attacks like ransomware, lateral movement, service account misuse, Pass-the-Hash, Golden Ticket and more.

Ready

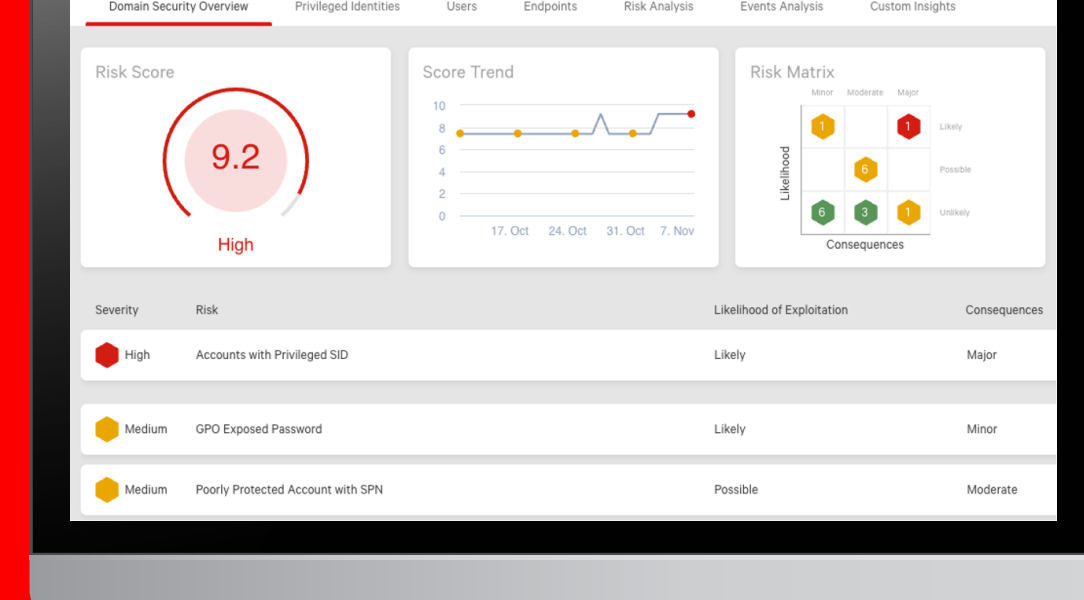

to get instant visibility into your AD to improve your protection capabilities against credential-based threats?

Set

up a complimentary Active Directory Risk Review with CrowdStrike experts today — this easy two-step process could help you uncover things like adversary attack paths, compromised passwords, excess privileges and more.

Here's what a recent Active Directory Risk Review participant had to say:

“The AD Risk Review was an eye-opener. It was incredibly helpful to have automated insights pointing us to our largest risks.”
